

## Project Design Phase-II Technology Stack (Architecture & Stack)

|               |   |
|---------------|---|
| Date          | 15 October 2022   |
| Team ID       | PNT2022TMID43448  |
| Project Name  | Deep Learning Fundus Image Analysis for Early Detection of Diabetic Retinopathy |
| Maximum Marks | 4 Marks   |

### Technical Architecture:

Project will fulfill the following information in this technology architecture.

**Table-1 : Components & Technologies:**

| S.No | Component                       | Description   | Technology                     |
|------|---------------------------------|---|--------------------------------|
| 1.   | User Interface                  | How user interacts with application<br>e.g.<br>Web UI, Mobile App, Chatbot etc.                               | HTML, CSS, JavaScript etc.     |
| 2.   | Application Logic-1             | Logic for a process in the application  | Python, Flask                  |
| 3.   | Database                        | Data Type, Configurations etc.  | MySQL, NoSQL, etc.             |
| 4.   | Cloud Database                  | Database Service on Cloud   | IBM DB2, IBM Cloudant etc.     |
| 5.   | Machine Learning Model          | Purpose of Machine Learning Model   | Diabetic Retinopathy detection |
| 6.   | Infrastructure (Server / Cloud) | Application Deployment on Local System / Cloud<br>Local Server Configuration:<br>Cloud Server Configuration : | Cloud.                         |

**Table-2: Application Characteristics:**

| <b>S.No</b> | <b>Characteristics</b>   | <b>Description</b>  | <b>Technology</b>                       |
|-------------|--------------------------|---|---|
| 1.          | Open-Source Frameworks   | List the open-source frameworks used  | Flask, TensorFlow. Keras. Numpy, Pandas |
| 2.          | Security Implementations | List all the security / access controls implemented, use of firewalls etc.  | Built-in protection.                    |
| 3.          | Scalable Architecture    | Justify the scalability of architecture (3 – tier, Micro-services)  | 3-tiers.                                |
| 4.          | Availability             | Justify the availability of applications (e.g. use of load balancers, distributed servers etc.)                           | Load balancer.                          |
| 5.          | Performance              | Design consideration for the performance of the application (number of requests per sec, use of Cache, use of CDN's) etc. | It depends upon the input images.       |
